DETAILED ACTION

Examiner's Amendment/Comment

1. The amendment filed 15 July 2009 includes changes to the specification, which need to be corrected as follows:
 - i) the first paragraph to be replaced starts on page 7, line 30 (not line 26).
 - ii) the second paragraph to be replaced starts on page 18, line 31 (not line 5).

Allowable Subject Matter

2. Claims 1-45 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Independent claims 1, 22, and 34 have been carefully considered. Prior art of record fails to teach the combination of claimed elements including using a multiple sets of sensing and rendering components to cover physical movements of multiple individuals present in different and separate environments; a thread detector that uses the multiple sets of sensing and rendering components to detect multiple communication interactions of different individuals and different groups of individuals present in different environments in order to maintain an interest thread for each communication interaction; a communication provider that captures different sets of media data from the sensing components and combines the captured media data of the different activities indicated by physical movements of each individual or groups of individuals and communicates the combined media to the rendering components; the

communication provider has a user manager to maintain a set of user profiles for each individual, the user profiles include permission profiles having thread permissions and user permissions for allowing each individual to control and make a thread private, public or restricted, so that each individual is enabled to keep his/her actions and presence from being detected by the interest thread detector.

Aoki et al (US 2004/0172255 A1) discloses a system and method for receiving multiple communications from multiple sources; mixing plurality of communication for a plurality of outputs associated with the plurality of sources; analyzing, for a plurality of users associated with the plurality of sources, conversational characteristics of two or more users, then automatically adjusting the plurality of floor controls. Aoki teaches that a physical environment can be augmented with sensors that track individual users; directional beam-forming arrays consisting of multiple microphones, so that the vocalizations for each tracked user can be captured as a separate audio stream; and speaker- identification techniques used to detect conversational characteristics of multiple users. Aoki fails to teach user profiles including permission profiles having thread permissions and user permissions configured to enable the plurality of users to keep their actions and presence from being detected by an interest thread detector.

Uchihashi et al (US 2004/0201710 A1) discloses a system and method for capture of meeting or presentation events; the system using multiple cameras and sensors for detecting physical motion of humans present in a conference. Uchihashi teaches displaying candidate activity events that are events of interest in the meeting.

Uchihashi fails to teach user profiles including permission profiles having thread permissions and user permissions configured to enable the plurality of users to keep their actions and presence from being detected by an interest thread detector.
